# Economic Development

11th Edition

MICHAEL P. TODARO | STEPHEN C. SMITH

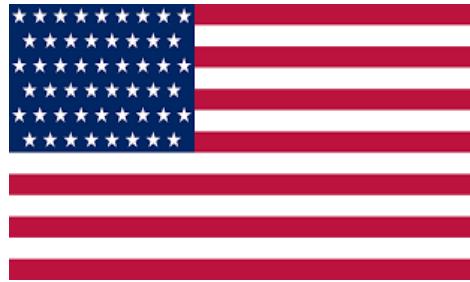

# Common characteristics of developing countries

- These features in common are *on average and with great diversity*, in comparison with developed countries:
  - Lower levels of living and productivity
  - Lower levels of human capital
  - Higher levels of inequality and absolute poverty
  - Higher population growth rates
  - Greater social fractionalization
  - Larger rural population - rapid migration to cities
  - Lower levels of industrialization and manufactured exports
  - Adverse geography
  - Underdeveloped financial and other markets
  - Colonial Legacies - poor institutions etc.

# Extreme Contrasts

- The most striking feature of the global economy is its extreme contrasts.
- Output per worker in the United States is about 10 times higher than it is in India and more than 50 times higher than in the Democratic Republic of Congo (DRC).
- How did such wide disparities come about?
- Why have some developing countries made so much progress in closing these gaps while others have made so little?

# Data

Indicator	U.S.	India	Democratic Republic of Congo (DRC)
GDP per capita	48,430\$	2,930\$	280\$
Life expectancy	78	65	46
Undernourishment	2.5%	22%	75%
Women Literacy	All	51%	56%
Output per worker	\$28 worth of goods and services per hour	\$2.8 worth of goods and services per hour (10 times lower than the U.S.)	\$0.56 worth of goods and services per hour (50 times lower than the U.S.)

# Figure 2.1 Nations of the World, Classified by GNI Per Capita

Source: Data from *Atlas of Global Development*, 2nd ed., pp. 10-11. © Collins Bartholomew Ltd., 2010.

## 2.2 Basic Indicators of Development: Real Income, Health, and Education

- Gross National Income (GNI)
- Gross Domestic Product (GDP)
- PPP method instead of exchange rates as conversion factors (see Figure 2.2)

<b>Gross national income (GNI) per capita</b>	<b>Gross domestic product (GDP) per capita</b>
Measures value added by residents who live within the country and those who live abroad (all residents)	Measures value added by residents and foreigners who live within the country
Deduction for capital is considered	Deduction for capital is not considered
Used in Development Economics	Used in Macroeconomics
Large <u>nonresident</u> population (foreigners) has no role in the domestic economy	Large <u>nonresident</u> population playing a major role in the domestic economy (such as foreign companies)

# Purchasing Power Parity (PPP)

**Purchasing power parity (PPP)** Calculation of GNI using a common set of international prices for all goods and services, to provide more accurate comparisons of living standards.

In a simple version, purchasing power parity is defined as the number of units of a foreign country's currency required to purchase the identical quantity of goods and services in the local developing country market as \$1 would buy in the United States. Generally, prices of nontraded services are much lower in developing countries because wages are so much lower.

# PPP cont.

- Purchasing power parity (PPP) is a popular metric used by macroeconomic analysts that compares different countries' currencies through a "basket of goods" approach.

# Calculating Purchasing Power Parity

- The relative version of PPP is calculated with the following formula:
- 
- $PPP = P1/P2$
- **where:**
- $PPP = \text{Exchange rate of currency 1 to currency 2}$   $P1 = \text{Cost of good } X \text{ in currency 1}$   $P2 = \text{Cost of good } X \text{ in currency 2}$

# PPP Example:

- To better understand how GDP paired with purchase power parity works, suppose it costs \$10 to buy a shirt in the U.S., and it costs €8.00 to buy an identical shirt in Germany. To make an apples-to-apples comparison, we must first convert the €8.00 into U.S. dollars. If the exchange rate was such that the shirt in Germany costs \$15.00, the PPP would, therefore, be 15/10, or 1.5.

# What Is the Big Mac Index?

- The Big Mac index is a survey created by *The Economist* magazine in 1986 to measure purchasing power parity (PPP) between nations, using the price of a McDonald's Big Mac as the benchmark.

## 30 Years Big Mac Index

Global prices for a Big Mac in selected countries in 2016

@StatistaCharts Sources: IMF, McDonald's, Thomson Reuters, The Economist

statista

# PPP using Big Mac Index :

## USA

- GDP = \$16
- Big Mac = \$2
- Basket of Goods=8
- GDP= \$16  
(PPP)

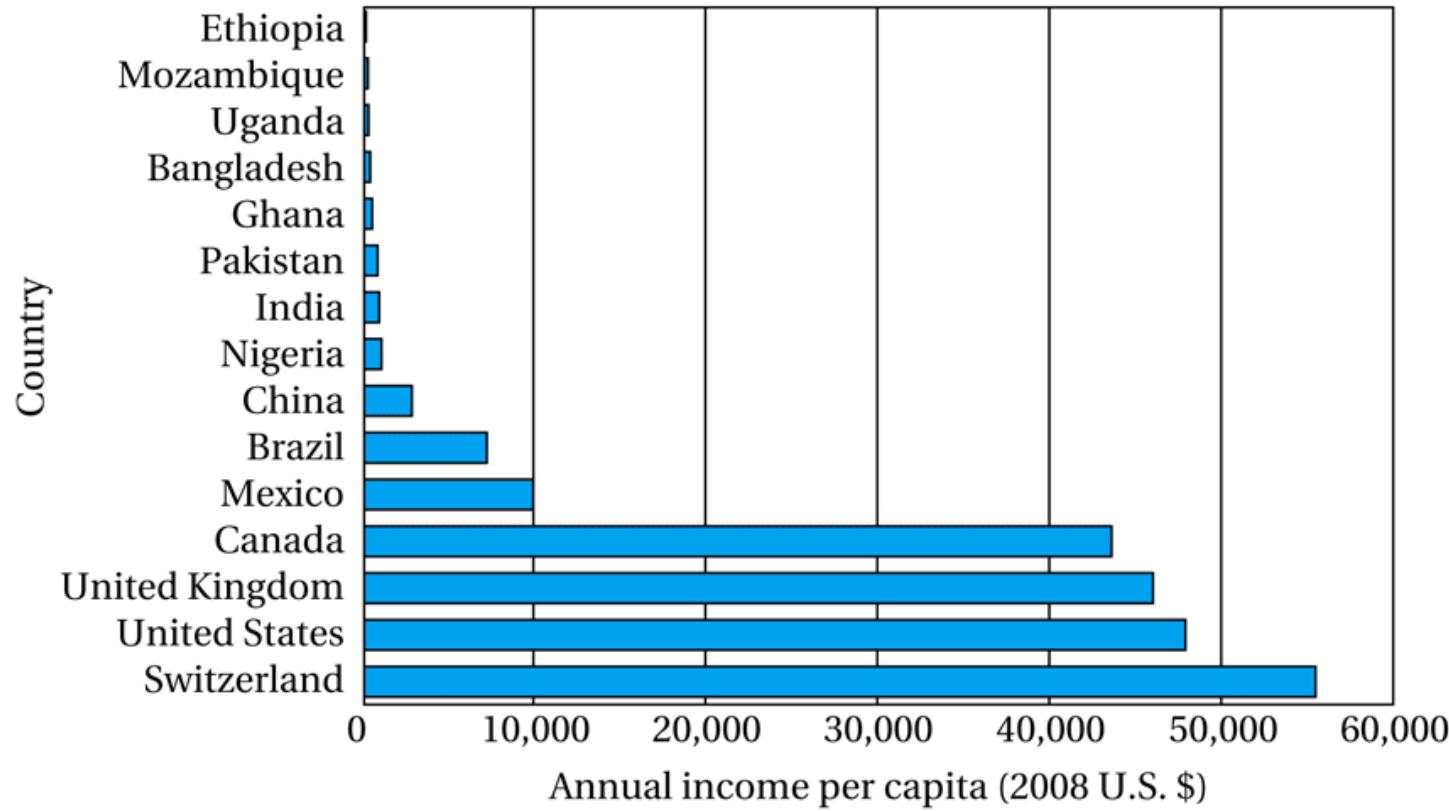

## Japan

- GDP = \$18
- Big Mac = \$6
- Basket of Goods=3
- GDP = \$6  
(PPP)

For example, China's 2008 GNI per capita was only 6% of that of the United States using the exchange-rate conversion but rises to 13% when estimated by the PPP method of conversion. Income gaps between rich and poor nations thus tend to be less when PPP is used.

## Figure 2.2 Income Per Capita in Selected Countries (2008)

Source: Data from World Bank, *World Development Indicators*, 2010 (Washington, D.C.: World Bank, 2010), tab. 1.1.

## Table 2.2 A Comparison of Per Capita GNI, 2008

Country	GNI Per Capita (U.S. \$)	
	Exchange Rate	Purchasing Power Parity
Argentina	7,190	13,990
Bangladesh	520	1,450
Brazil	7,300	10,070
Burundi	140	380
Cameroon	1,150	2,170
Chile	9,370	13,240
China	2,940	6,010
Costa Rica	6,060	10,950
Ghana	630	1,320
Guatemala	2,680	4,690
India	1,040	2,930
Indonesia	1,880	3,590
Kenya	730	1,550
Malawi	280	810
Malaysia	7,250	13,730
Mexico	9,990	14,340
Nicaragua	1,080	2,620
Sierra Leone	320	770
South Korea	21,530	27,840
Sri Lanka	1,780	4,460
Thailand	3,670	7,760
Uganda	420	1,140
United Kingdom	46,040	36,240
United States	47,930	48,430
Venezuela	9,230	12,840
Zambia	950	1,230

Source: Data from World Bank, *World Development Indicators, 2010* (Washington, D.C.: World Bank, 2010) tab. 1.1.

## 2.3 Holistic Measures of Living Levels and Capabilities

- Health
- Life Expectancy
- Education
- HDI as a holistic measure of living levels
- $\text{HDI} = \frac{1}{3} (\text{income index}) + \frac{1}{3} (\text{life expectancy index}) + \frac{1}{3} (\text{education index})$
- HDI can be calculated for groups and regions in a country
  - HDI varies among groups within countries
  - HDI varies across regions in a country
  - HDI varies between rural and urban areas

# Human Development Index (HDI)

The HDI attempts to rank all countries on a scale of 0 (lowest human development) to 1 (highest human development) based on three goals or end products of development:

***longevity*** as measured by life expectancy at birth.

***knowledge*** as measured by a weighted average of adult literacy (two-thirds) and gross school enrollment ratio (one third).

***standard of living*** as measured by real per capita gross domestic product adjusted for the differing purchasing power parity of each country's currency to reflect cost of living.

<http://hdr.undp.org/en/2016-report>

<http://hdr.undp.org/en/content/address-hdro-director-selim-jahan-economy-4th-industrial-revolution-world-knowledge-summit>

## Example : Calculating HDI of India.

- Life expectancy index = 0.679
- Education index = 0.495
- Income index = 0.599

- $\text{HDI} = (\text{LI} * \text{EI} * \text{II})^{1/3}$
- $$\begin{aligned}\text{HDI} &= (0.679 * 0.495 * 0.599)^{1/3} \\ &= 0.586\end{aligned}$$

# Table 2.3 Commonality and Diversity: Some Basic Indicators

Country or Group	2008 Income Per Capita (U.S. \$)	2008 PPP Per Capita (U.S. \$)	2008 Life Expectancy (years)	Prevalence of Undernourishment <sup>a</sup> (%)	2007 Under-5 Mortality per 1,000 Live Births	2008 Crude Birth Rate	Adult Literacy <sup>b</sup>

Note: Ethiopia agricultural employment reflects limited coverage.

## 2.4 Characteristics of the Developing World: Diversity within Commonality

### 9. Underdeveloped Financial and Other markets

- Imperfect markets
- Incomplete information

### 10. Colonial Legacy and External Dependence

- Institutions
- Private property
- Personal taxation
- Taxes in cash rather than in kind

## 2.6 Are Living Standards of Developing and Devolved Nations Converging?

- Evidence of unconditional convergence is hard to find
- But there is increasing evidence of “per capita income convergence,” weighting changes in per capita income by population size

## 2.7 Long-Run Causes of Comparative Development

- Schematic Representation
  - Geography
  - Institutional quality- colonial and post-colonial
  - Colonial legacy- pre colonial comparative advantage
  - Evolution and timing of European development
  - Inequality- human capital
  - Type of colonial regime

# Nature and Role of Economic Institutions

- Institutions provide “rules of the game” of economic life
- Provide underpinning of a market economy
- Include property rights; contract enforcement
- Can work for improving coordination,
- Restricting coercive, fraudulent and anti-competitive behavior
- Providing access to opportunities for the broad population-
- Constraining the power of elites, and managing conflict
- Provision of social insurance
- Provision of predictable macroeconomic stability
