Procedure Evaluation Document (PED)

PROCEDURE: Eye irrigation												Code	28-02
No.	Skill steps											Not achieved	Achieved
1	Prepared the procedure equipment: <input type="checkbox"/> Patient medical record <input type="checkbox"/> Sterile container <input type="checkbox"/> Normal saline or prescribed irrigating solution <input type="checkbox"/> Sterile gauze <input type="checkbox"/> Kidney dish <input type="checkbox"/> Towel <input type="checkbox"/> Hand rub gel												
2	Identified the patient using two identifiers (name, date of birth, address).												
3	Performed greeting, introduction and permission procedure (G.I.P).												
4	Provided privacy.												
5	Explained the procedure to the patient and answered any questions.												
6	Performed hand hygiene using correct technique.												
7	Asked the patient to sit or lie with head tilted toward side of affected eye.												
8	Protected patient and bed with a waterproof pad.												
9	Put on gloves.												
10	Cleaned lids and lashes with sterile gauze moistened with normal saline or the solution ordered for the irrigation wiping from inner canthus to outer canthus and using a different corner of gauze with each wipe.												
11	Placed kidney dish at cheek on the side of the affected eye to receive irrigating solution.												
12	If patient was able, ask him or her to support the kidney dish.												
13	Filled the irrigation syringe with the prescribed fluid.												
14	Exposed lower conjunctival sac and held upper lid open with your non-dominant hand.												
15	Held the irrigation syringe about 2.5 cm (1 inch) from eye and directed flow of solution from inner to outer canthus along conjunctival sac.												
16	Used only enough force to remove secretions gently from the conjunctiva.												
17	Avoided touching any part of the eye with the irrigating tip.												
18	Paused irrigation and asked the patient to close the eye periodically during procedure.												
19	Irrigated until the solution is clear or all the solution has been used.												
20	Dried peri-orbital area after irrigation with gauze sponge.												
21	Offered a towel to the patient if face and neck are wet.												
22	Removed gloves.												
23	Assisted the patient to a comfortable position.												
24	Performed hand hygiene using correct technique.												
25	Evaluated the patient's response to the procedure.												
26	Documented the result in the patient's record.												
27	Returned equipment to the dedicated area.												
28	Reported abnormal findings to the appropriate health care provider (student reported this action verbally).
