Web Programming (IT349)

Sample Question Types

Dear Students,

Please note that you can take advantage of the following questions only to understand the style of the mid-term exam questions.

Theoretical Part

Q. What does the function strlen() return?

A) Number of words

B) Number of characters

C) The reversed string

D) The first letter

Q. In PHP, the _____ function is used to convert a string to lowercase.

Q. All elements in a PHP array must have numeric indices. (If false, correct the statement)

  A) True
  B) False

Q. Briefly explain the difference between the strlen() and str_word_count() functions in PHP.

Q. Write the output of the following PHP code:

```php
<?php
$arr = array("PHP", "is", "fun");
for ($i = 0; $i <= 2; $i++) {
  echo $arr[$i] . "<br>";
}
?>
```

//Write the output here

Q. Write the PHP code that prints the elements of the following array:

$numbers = array(10,20,30,40,50);

//Write the code here

Practical Part

To prepare for the practical part, you may refer to the lab exercises and practical examples provided in the lecture notes, and solving additional practice questions is recommended to improve your skills.
