

CapCut

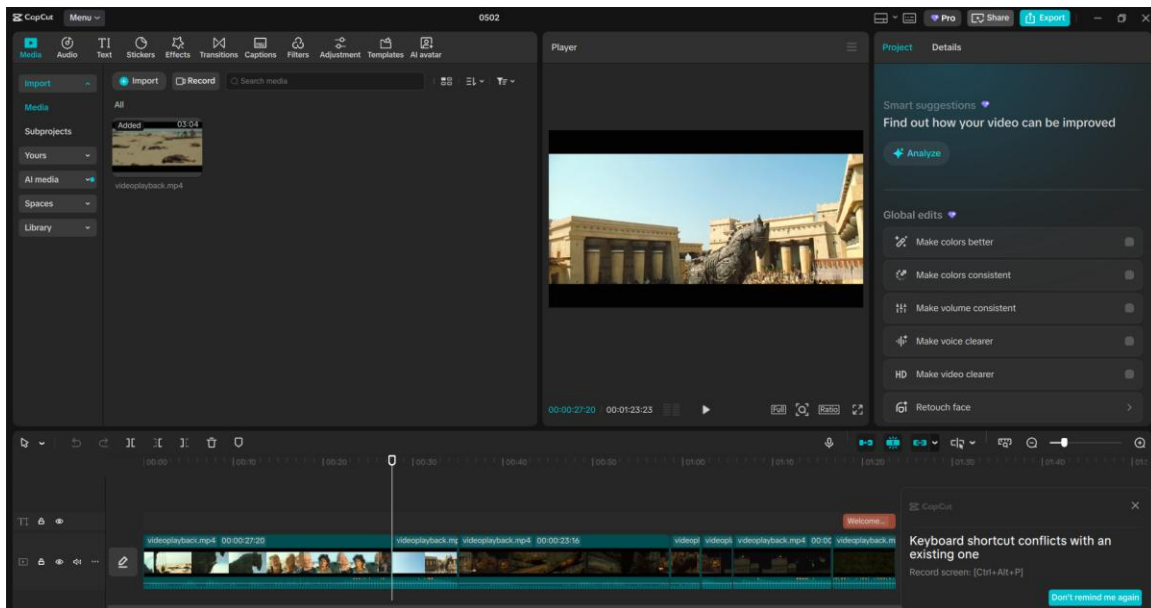

CapCut is a video editing software used to create and edit videos easily. It is popular for social media videos, educational videos, advertisements, and short films.

With CapCut, we can:

- Cut and arrange video clips
- Add text and captions
- Add music and voice
- Use transitions and effects
- Improve video color and sound
- Export the final video

2. Main Parts of the CapCut Interface

In the screenshot, the CapCut interface is divided into **five main areas**.

1. Media Panel — Left Side

This is where we import and manage our files.

In this area, we can add:

- Videos
- Images

- Audio files
- Recorded screen videos

The **Import** button is used to bring files from the computer into the project.

2. Top Toolbar

At the top, there are important tools:

- **Media:** add videos and images
- **Audio:** add music or sound effects
- **Text:** add titles or written words
- **Stickers:** add visual stickers
- **Effects:** add special effects
- **Transitions:** add movement between clips
- **Captions:** add subtitles
- **Filters:** change the look of the video
- **Adjustment:** control brightness, contrast, colors
- **Templates:** use ready-made designs

3. Player / Preview Window

This is where we watch the video while editing.

We use it to check:

- The current frame
- The result of cuts
- Effects and transitions
- Text position
- Video quality

The play button under the preview lets us watch the project.

4. Timeline — Bottom

The timeline is the most important area in video editing. You can add or cut videos and audios here. As premiere pro, many tracks can be added,

It shows the video clips in order from left to right.

The white vertical line is called the **playhead**.
It shows the exact position we are currently viewing.

.

3. Steps:

A simple editing process follows these steps:

Step 1: Import Media

Click **Import** and choose the video, image, or audio file.

Step 2: Add to Timeline

Drag the media file from the media panel to the timeline.

Step 3: Cut and Arrange

Remove unwanted parts and organize the clips.

Step 4: Add Text or Audio

Use the top toolbar to add titles, captions, music, or voice.

Step 5: Preview the Video

Watch the video in the player window and check your edits.

Step 6: Export

Click **Export** at the top right to save the final video.

You can rightclick → extract audio, then go to caption for auto generating text.
